TRADEMARK REGISTRATIONS CANCELED

The designation "U.S. Cl." appearing in this section refers to the U.S. class in effect prior to Sep. 1, 1973 rather than the international class which applies to applications filed on or after that date. For adoption of international classification see notice in the OFFICIAL GAZETTE of Jun. 26, 1973 (911 O.G. TM 210).

TRADEMARK REGISTRATIONS AMENDED, CORRECTED, ETC.

The designation "U.S. Cl." appearing in this section refers to the U.S. class in effect prior to Sep. 1, 1973 rather than the international class which applies to applications filed on or after that date. For adoption of international classification see notice in the OFFICIAL GAZETTE of Jun. 26, 1973 (911 O.G. TM 210).

Any change to the registration will be indicated at the bottom of each entry under ELEMENTS AMENDED, CORRECTED OR RESTRICTED. With the exception of changes to the goods and services, additions to the registration will appear in asterisks and deletions of the registration will appear in brackets. Elements which are only changed will be listed with no punctuation. As to the goods/services statement, amendments to the goods/services will appear in asterisks and deletions will appear in brackets. In addition if any change to the goods/services occurs, the element "Goods/Services" will be listed under ELEMENTS AMENDED, CORRECTED OR RESTRICTED.

REGISTRATIONS PUBLISHED UNDER SEC. 12(c)

The following marks registered under the act of 1905, or the act of 1881, are published under the provisions of section 12(c) of the Trademark Act of 1946. These registrations are not subject to opposition but are subject to cancellation under section 14 of the act of 1946.

The designation "U.S. Cl." appearing in this section refers to the U.S. class in effect prior to Sep. 1, 1973 rather than the international class which applies to applications filed on or after that date. For adoption of international classification see notice in the OFFICIAL GAZETTE of Jun. 26, 1973 (911 O.G. TM 210).

Patent Cooperation Treaty (PCT) Information

For information concerning PCT member countries, see the notice appearing in the *Official Gazette* at 1168 O.G. 100, on Nov. 29, 1994.

For use of the European Patent Office as an International Searching Authority for international applications filed in the United States Receiving Office, see the notice appearing in the *Official Gazette* at 1022 O.G. 52, on Sept. 28, 1982.

For use of the European Patent Office as an International Preliminary Examining Authority for international applications filed in the United States Receiving Office, see the notices appearing in the *Official Gazette* at 1080 O.G. 2, on July 7, 1987, and at 1091 O.G. 2, on June 7, 1988. There is no longer a limit on the number of such international applications accepted for international preliminary examination by the European Patent Office; see the notice appearing at 1116 O.G. 32, on July 17, 1990.

The search fee of the European Patent Office was changed, effective Oct. 1, 1994, due to a change in the exchange rate of the U.S. dollar with regard to the German mark, and was announced in the *Official Gazette* at 1165 O.G. 81, on Aug. 23, 1994.

International fees were changed, effective on January 1, 1995, due to a change in the exchange rate of the U. S. dollar with regard to the Swiss franc, and were announced in the *Official Gazette* at 1168 O.G. 99, on Nov. 29, 1994.

Certain domestic PCT fees and charges for International Search and Preliminary Examination were changed, effective Oct. 1, 1994, and were announced in the *Official Gazette* at 1165 O.G. 132, on Aug. 30, 1994.

Patent Cooperation Treaty Update

Accession by Uganda

The United States Patent and Trademark Office received notification from the World Intellectual Property Organization (WIPO) that Uganda deposited its instrument of accession to the Patent Cooperation Treaty (PCT) on November 9, 1994. Uganda will become the 75th Contracting State of the PCT on February 9, 1995. Consequently, nationals and residents of Uganda are

VOL 1170 ISS 4 JA 24 1995 UMI

entitled to file international applications under the PCT on and after February 9, 1995, and from the same date it is possible to file international applications designating and electing Uganda (country code: UG).

Designation for an ARIPO Patent will include Uganda

The African Regional Industrial Property Organization (ARIPO) has 14 member States, 11 of which are party to the Harare Protocol on Patents and Industrial Designs. The Harare Protocol makes it possible to obtain an ARIPO patent effective in any or all of the Protocol's member States. Under amendments to the Harare Protocol and its Implementing Regulations adopted in April 1994, an international application under the PCT will be able to include a designation for an ARIPO patent (two-letter code: AP) of those Harare Protocol member States which are also Contracting States of the PCT. Processing of such international applications in the regional phase will be undertaken by the ARIPO office as a designated (or elected) Office under the PCT. Since Uganda is a member of the Harare Protocol within the framework of ARIPO, Uganda will be able to be designated for a patent granted by ARIPO. As of February 9, 1995, any designation in an international application for an ARIPO patent will automatically include the designation of Uganda for that purpose.

Accession by Singapore

The United States Patent and Trademark Office received notification from WIPO that Singapore deposited its instrument of accession to the PCT on November 23, 1994. Singapore will become the 76th Contracting State of the PCT on February 23, 1995. Consequently, nationals and residents of Singapore are entitled to file international applications under the PCT on and after February 23, 1995, and from the same date it is possible to file international applications designating and electing Singapore (county code: SG).

[1]Although the PCT entered into force on January 24, 1978, the Assembly of the PCT Union fixed June 1, 1978, as the date from which international applications could be filed and demands for international preliminary examination could be submitted.

[2]Members of African Intellectual Property Organization (OAPI) regional patent system. Only regional patent protection is available for OAPI countries. A designation of any country is an indication that all OAPI countries have been designated. Only one designation fee is due regardless of the number of OAPI member countries designated.

[3]Member of European Patent Convention (EPC) regional patent system. Either national or European patents for member countries are available through PCT, except for France, Monaco, Belgium, Italy, Greece and Ireland for which only European patents are available if PCT is used. Note: Only one designation fee is due if European regional patent protection is sought for one, several or all EPC member countries under the PCT.

[4]Declaration of continued application.

Notice of Maintenance Fees Payable

Title 37 Code of Federal Regulations (CFR), Section 1.362(d) provides that maintenance fees may be paid without surcharge for the six-month period beginning 3, 7, and 11 years after the date of issue of patents based on applications filed on or after Dec. 12, 1980. An additional six-month grace period is provided by 35 U.S.C. 41(b) and 37 CFR 1.362(e) for payment of the maintenance fee with the surcharge set forth in 37 CFR 1.20(h), as amended effective Dec. 16, 1991. If the maintenance fee is not paid in the patent requiring such payment the patent will expire on the 4th, 8th, or 12th anniversary of the grant.

Attention is drawn to the patents which were issued on January 21, 1992 for which maintenance fees due at 3 years and six months may now be paid. The patents have patent numbers within the following ranges:

Utility Patents 5,078,714 through 5,083,313
Reissue Patents based on the above identified patents.

Attention is drawn to the patents which were issued on January 19, 1988 for which maintenance fees due at 7 years and six months may now be paid. The patents have patent numbers within the following ranges:

Utility Patents 4,719,650 through 4,720,873
Reissue Patents based on the above identified patents.

Attention is drawn to the patents which were issued on January 17, 1984 for which maintenance fees due at 11 years and six months may now be paid. The patents have patent numbers within the following ranges:

Utility Patents 4,425,667 through 4,426,738
Reissue Patents based on the above identified patents.

No maintenance fees are required for design or plant patents.

Payments of maintenance fees in patents should be directed to "Commissioner of Patents and Trademarks, Box M. Fee, Washington, D.C. 20231."

For patents based on applications filed on or after Dec. 12, 1980, but before Aug. 27, 1982, patent owners must establish small entity status according to 37 CFR 1.27 if they have not done so and if they wish to pay the small entity amount.

The current amounts of the maintenance fees due at 3 years and six months, 7 years and six months, and 11 years and six months are set forth in 37 CFR 1.20(e)-(g), as amended Oct. 1, 1994, which are reproduced below:

37 CFR § 1.20 Post-issuance fees

VOL 1170 ISS 4 JA 24 1995 UMI

(e) For maintaining an original or reissue patent, except a design or plant patent, based on an application filed on or after Dec. 12, 1980, in force beyond 4 years; the fee is due by three years and six months after the original grant:

By a small entity (§ 1.9(f)) $480.00
By other than a small entity $960.00

(f) For maintaining an original or reissue patent, except a design or plant patent, based on an application filed on or after Dec. 12, 1980 in force beyond 8 years; the fee is due by seven years and six months after the original grant:

By a small entity (§ 1.9(f)) $965.00
By other than a small entity $1,930.00

(g) For maintaining an original or reissue patent, except a design or plant patent, based on an application filed on or after Dec. 12, 1980 in force beyond 12 years; the fee is due by eleven years and six months after the original grant:

By a small entity (§ 1.9(f)) $1,450.00
By other than a small entity $2,900.00

The amount of the surcharge for paying the maintenance fee during the grace period or after expiration of the patent are set forth in 37 CFR 1.20(h), and (i) which are reproduced below:

(h) Surcharge for paying a maintenance fee during the 6 month grace period following the expiration of three years and six months, seven years and six months, and eleven years and six months after the date of the original grant of a patent based on an application filed on or after Dec. 12, 1980:

By a small entity (§ 1.9(f)) $65.00
By other than a small entity $130.00

(i) Surcharge for accepting a maintenance fee after expiration of a patent for non-timely payment of a maintenance fee where the delay is shown to the satisfaction of the Commissioner to have been:

(1) unavoidable $640.00
(2) unintentional $1,500.00

Notice of Expiration of Patents Due to Failure to Pay Maintenance Fee

35 U.S.C. 41 and 37 CFR 1.362(g) provide that if the required maintenance fee and any applicable surcharge are not paid in a patent requiring such payment, the patent will expire at the end of the 4th, 8th or 12th anniversary of the grant of the patent depending on the first maintenance fee which was not paid.

According to the records of the Office, the patents listed below have expired due to failure to pay the required maintenance fee and any applicable surcharge.

Patent and Trademark Office

Request for Comments on Proposed Utility Examination Guidelines

Agency: Patent and Trademark Office, Commerce

Action: Notice and request for public comments.

Summary: The Patent and Trademark Office (PTO) requests comments from any interested member of the public on proposed internal guidelines that will be used by patent examiners in their review of patent applications for compliance with 35 U.S.C. § 101. Because these guidelines govern internal practices, they are exempt from notice and comment rulemaking under 5 U.S.C. § 553(b)(A).

Dates: Written comments on the proposed guidelines will be accepted by the PTO until February 24, 1995.

Addresses: Written comments should be addressed to the Commissioner of Patents and Trademarks, marked to the attention of Jeff Kushan. Comments submitted by mail should be sent to Commissioner of Patents and Trademarks, Box 4, Patent and Trademark Office, Washington, D.C. 20231. Comments may also be submitted by telefax at (703) 305-8885 and by electronic mail through the Internet to "comments-biotech@uspto.gov." Written comments should include the following information:

- name and affiliation of the individual responding;

-an indication of whether comments offered represent views of the respondent's organization or are the respondent's personal views; and

-if applicable, information on the respondent's organization, including the type of organization (e.g., business, trade group, university, non-profit organization) and general areas of interest.

Parties presenting written comments are requested, where possible, to provide their comments in machine readable format. Such submissions may be provided by electronic mail messages sent over the Internet, or on a 3.5" floppy disk formatted for use in either a Macintosh or MSDOS based computer. Machine-readable submissions should be provided as unformatted text (e.g., ASCII or plain text).

Written comments will be available for public inspection on or about March 1, 1995, in Room 902 of Crystal Park Two, 2121 Crystal Drive, Arlington, Virginia. In addition, comments provided in machine readable format will be available on or around March 1, 1995, through anonymous file transfer protocol (ftp) via the Internet (address: comments.uspto.gov) and through the World Wide Web (address: www.uspto.gov).

For Further Information Contact: Jeff Kushan by telephone at (703) 305-9300, by fax at (703) 305-8885, by electronic mail at kushan@uspto.gov, or by mail marked to his attention addressed to the Commissioner of Patents and Trademarks, Box 4, Washington, D.C. 20231.

Supplementary Information

I. Guidelines for Examination of Applications for Compliance with the Utility Requirement

A. Introduction

The following guidelines establish the policies and procedures to be followed by Examiners when examining applications for compliance with the utility requirement of 35 U.S.C. § 101. The guidelines also address issues that may arise during examination of applications claiming protection for inventions in the field of biotechnology and human therapy. The guidelines are accompanied by an overview of applicable legal precedent governing the utility requirement.

B. Guidelines for Examination of Applications for Compliance With 35 U.S.C. § 101

Examiners must adhere to the following procedures when examining applications for compliance with 35 U.S.C. § 101.

1. Determine what the applicant has claimed as his or her invention. This is done to:

a) ensure that the applicant has claimed statutory subject matter (e.g., a process, a machine, a composition or a manufacture); and

b) ascertain what the invention is for purposes of determining whether it is "useful."

2. Review the specification and claims to determine if the applicant has disclosed or asserted or any credible utility for the claimed invention.

a) If the applicant has asserted that the claimed invention is useful for any particular purpose and that assertion would be considered credible by a person of ordinary skill in the art, the Examiner should not impose a rejection based on § 101. Credibility is to be assessed from the perspective of one of ordinary skill in the art in view of any evidence of record (e.g., data, statements, opinions, references, etc.) that is relevant to the applicant's assertions.

b) If the applicant has not asserted that the claimed invention is useful for a particular purpose but such a use would be readily apparent to a person of ordinary skill in the art, the Examiner should not impose a rejection under § 101.

3. If the applicant has not asserted any credible utility for the claimed invention or a utility would not be readily apparent to one of ordinary skill in the art, reject the claims under § 101. To be considered appropriate by the Office, a rejection under § 101 must include the following elements:

a) A prima facie showing that the claimed invention has no utility. A prima facie showing of no utility must establish that it is more likely than not that a person of ordinary skill in the art would not consider credible any utility for the claimed invention that has been asserted by the applicant. Where no utility has been asserted in the disclosure, the prima facie showing must support a finding that a person of ordinary skill would not be able to ascertain any use for the claimed invention. A prima facie showing must contain:

i) a well-reasoned statement by the Examiner that clearly sets forth the reasoning used in reaching his or her conclusions;

ii) support for factual findings relied upon by the Examiner in reaching his or her conclusions; and

iii) support for conclusions of the Examiner that evidence provided by the applicant to support an asserted utility would not be considered persuasive to a person of ordinary skill in the art.

b) Evidence that supports any factual assertions relied upon by the Examiner in establishing the prima facie showing. Whenever possible, the Examiner must provide documentary evidence that supports the factual basis of a prima facie showing of no utility (e.g., scientific or technical journals, excerpts from treatises or books, or U.S. or foreign patents). If documentary evidence is not available, the Examiner should note this fact and specifically explain the scientific basis for his or her conclusions.

4. A rejection under § 101 should not be maintained if an asserted utility for the claimed invention would be considered credible by a person of ordinary skill in the art in view of all evidence of record.

Once a prima facie showing of no utility has been properly established, the applicant bears the burden of rebutting it. The applicant can do this by amending the claims, by providing reasoning or arguments, or by providing evidence in the form of a declaration under 37 CFR § 1.132 or a printed publication, that rebuts the prima facie showing. Once a response has been received by the Examiner, he or she should review the original disclosure, any evidence relied upon in establishing the prima facie showing, any claim amendments and any new reasoning or evidence provided by the applicant in support of an asserted utility. It is essential that the Examiner recognize, fully consider

VOL 1170 ISS 4 JA 24 1995 UMI

and respond to each substantive element of any response to a rejection under § 101.

Examiners are reminded that they must treat as true credible statements made by an applicant or a declarant in the specification or in a declaration provided under 37 CFR § 1.132, unless they can show that one of ordinary skill in the art would have a rational basis to doubt the truth of such statements. Thus, not accepting the opinion of a qualified expert that is based on an appropriate factual record would clearly be improper.

II. Additional Information

The PTO has prepared an analysis of the law governing 35 U.S.C. § 101 to support the guidelines outlined above. Interested members of the public are invited to comment on the legal analysis as well as the guidelines. Copies of the legal analysis can be obtained from Jeff Kushan, who can be reached using the information indicated above.

SPECIAL BOXES FOR PATENT MAIL

Special box designations should be used to allow forwarding of particular types of mail to the appropriate areas as quickly as possible. Such mail is forwarded to the appropriate area without being opened. Only the specified type of document should be placed in an envelope addressed to one of these special boxes. If any documents other than the specified type identified for each special box are addressed to that box, they will be significantly delayed in reaching the appropriate area for which they are intended.

Please address mail as follows:

Box _____
Commissioner of Patents and Trademarks
Washington, D.C. 20231

Box Designations	Explanation
Box 7	Reissue applications for patents involved in litigation and subsequently filed related papers.
Box 12	Contributions to the Examiner Education Program.

SPECIAL BOXES FOR TRADEMARK MAIL

Special box designations should be used to allow forwarding of particular types of trademark mail to the appropriate areas as quickly as possible. In addition to these box designations, filers are encouraged to indicate whether the contents of the envelope contain a fee. Envelopes containing a fee should be marked "FEE;" envelopes not containing a fee should be marked "NO FEE." Box designations and "FEE/NO FEE" indicators should appear on the envelope as well as on the cover sheet or first page of any document.

Please address mail as follows:

Box _____

Reference Collections of U.S. Patents and Trademarks Available for Public Use in Patent and Trademark Depository Libraries

The following libraries, designated as Patent and Trademark Depository Libraries (PTDLs), receive patent and trademark information in various formats from the U.S. Patent and Trademark Office. Many PTDLs have on file all full-text patents issued since 1790, trademarks published since 1872, and select collections of foreign patents. All PTDLs have both the patent and trademark sections of the *Official Gazette of the U.S. Patent and Trademark Office*. The full-text utility and design patents are distributed numerically on 16 mm microfilm, and plant patents on color microfiche. Patent and trademark search systems on CD-ROM (Compact Disc-Read Only) format are available at all PTDLs to increase utilization of and enhance access to the information found in patents and trademarks. It is through the CD-ROM systems that preliminary patent and trademark searches can be conducted through the numerically arranged collections.

All information is available for use by the public free of charge.

In addition, each PTDL offers reference publications which outline and provide access to the patent and trademark classification systems, as well as other documents and publications which supplement the basic search tools. PTDLs provide technical staff assistance in using all materials. Facilities for making paper copies of patent and trademark information are generally provided for a fee.

Since there are variations in the scope of patent and trademark collections among the PTDLs, and their hours of service to the public vary, anyone contemplating use of these collections at a particular library is urged to contact that library in advance about its collections, services, and hours in order to avert possible inconvenience.

MARKS PUBLISHED FOR OPPOSITION

The following marks are published in compliance with section 12(a) of the Trademark Act of 1946. Applications for the registration of marks in more than one class have been filed as provided in section 30 of said act as amended by Public Law 772, 87th Congress, approved Oct. 9, 1962, 76 Stat. 769. Opposition under section 13 may be filed within thirty days of the date of this publication. See rules 2.101 to 2.105.

A separate fee of two hundred dollars for opposing each mark in each class must accompany the opposition.

SECTION 1.—INTERNATIONAL CLASSIFICATION

The short titles associated below with the international class numbers are terms designed merely for quick identification and are not an official part of the international classification. The full names of international classes are given in section 6.1 of the trademark rules of practice.

The designation "U.S. Cl." appearing in this section refers to the U.S. class in effect prior to Sep. 1, 1973 rather than the international class which applies to applications filed on or after that date. For adoption of international classification see notice in the OFFICIAL GAZETTE of Jun. 26, 1973 (911 O.G. TM 210).

SECTION 2.—INTERNATIONAL CLASSIFICATION

The short titles associated below with the international class numbers are terms designed merely for quick identification and are not an official part of the international classification. The full names of international classes are given in section 6.1 of the trademark rules of practice.

The designation "U.S. Cl." appearing in this section refers to the U.S. class in effect prior to Sep. 1, 1973 rather than the international class which applies to applications filed on or after that date. For adoption of international classification see notice in the OFFICIAL GAZETTE of Jun. 26, 1973 (911 O.G. TM 210).

SN 74-344,893. UNION VITI-VINICOLA, S.A., LA RIOJA, SPAIN, FILED 12-31-1992.

OWNER OF SPAIN REG. NO. 1610610, DATED 9-5-1991, EXPIRES 9-5-2011.

NO CLAIM IS MADE TO THE EXCLUSIVE RIGHT TO USE "RIOJA", "12% VOL.", "75 CL. E", "1842", "PRODUCIDO Y EMBOTELLADO EN RIOJA ALTA", "CENICERO", "DENOMINACION DE ORIGEN", "ESPANA", "SPAIN" AND "EMBOTELLADO POR", APART FROM THE MARK AS SHOWN.

THE DRAWING OF THE MARK IS A DEPICTION OF FOUR ELEMENTS OF LABELLING WHICH ARE AFFIXED TO BOTTLES OF APPLICANT'S PRODUCT. THE LARGER RECTANGLE LIKE PANEL IS THE PRIMARY FRONT LABEL, THE MEDIUM SQUARE IS A BACK LABEL AND THE SMALLER RECTANGLE AND CIRCLE ARE A NECK LABEL. THE BACKGROUNDS OF EACH ARE COLORED A DARK BROWN AND THE PRINTING, DESIGNS AND BORDER LININGS ARE GOLD. COLOR IS CLAIMED AS A FEATURE OF THE MARK. THE DESIGNS ON THE LABELS ARE HERALDIC AND SHOW REPRESENTATIONS OF COATS OF ARMS CONTAINING CROWNS, DRAPES AND IN THE CENTER, A CASTLE.

THE WORDS "PRODUCIDO Y EMBOTELLADO EN RIOJA ALTA" ARE SPANISH FOR "PRODUCED AND BOTTLED IN THE RIOJA REGION". "MARQUES DE CACERES" COULD BE TRANSLATED AS "MARK OF CACERES" AND "CENICERO" IS THE NAME OF A TOWN IN SPAIN. "DENOMINACION DE ORIGEN" COULD BE TRANSLATED AS "APPELLATION" AND "EMBOTELLADO POR" AS "PRODUCED BY".

SECTION 1.—INTERNATIONAL CLASSIFICATION

The short titles associated below with the international class numbers are terms designed merely for quick identification and are not an official part of the international classification. The full names of international classes are given in section 6.1 of the trademark rules of practice.

The designation "U.S. Cl." appearing in this section refers to the U.S. class in effect prior to Sep. 1, 1973 rather than the international class which applies to applications filed on or after that date. For adoption of international classification see notice in the OFFICIAL GAZETTE of Jun. 26, 1973 (911 O.G. TM 210).

TRADEMARK REGISTRATIONS ISSUED UNDER SECTION 1(d)

The following marks have registered on the Principal Register pursuant to the intent-to-use provisions of Section 1(d) of the Trademark Act of 1946, as amended.

SECTION 1.—INTERNATIONAL CLASSIFICATION

The short titles associated below with the international class numbers are terms designed merely for quick identification and are not an official part of the international classification. The full names of international classes are given in section 6.1 of the trademark rules of practice.

The designation "U.S. Cl." appearing in this section refers to the U.S. class in effect prior to Sep. 1, 1973 rather than the international class which applies to applications filed on or after that date. For adoption of international classification see notice in the OFFICIAL GAZETTE of Jun. 26, 1973 (911 O.G. TM 210).

SECTION 2.—INTERNATIONAL CLASSIFICATION

The short titles associated below with the international class numbers are terms designed merely for quick identification and are not an official part of the international classification. The full names of international classes are given in section 6.1 of the trademark rules of practice.

The designation "U.S. Cl." appearing in this section refers to the U.S. class in effect prior to Sep. 1, 1973 rather than the international class which applies to applications filed on or after that date. For adoption of international classification see notice in the OFFICIAL GAZETTE of Jun. 26, 1973 (911 O.G. TM 210).

TRADEMARK REGISTRATIONS AMENDED, CORRECTED, ETC.

The designation "U.S. Cl." appearing in this section refers to the U.S. class in effect prior to Sep. 1, 1973 rather than the international class which applies to applications filed on or after that date. For adoption of international classification see notice in the OFFICIAL GAZETTE of Jun. 26, 1973 (911 O.G. TM 210).

Any change to the registration will be indicated at the bottom of each entry under ELEMENTS AMENDED, CORRECTED OR RESTRICTED. With the exception of changes to the goods and services, additions to the registration will appear in asterisks and deletions of the registration will appear in brackets. Elements which are only changed will be listed with no punctuation. As to the goods/services statement, amendments to the goods/services will appear in asterisks and deletions will appear in brackets. In addition if any change to the goods/services occurs, the element "Goods/Services" will be listed under ELEMENTS AMENDED, CORRECTED OR RESTRICTED.

Notice of Maintenance Fees Payable

Title 37 Code of Federal Regulations (CFR), Section 1.362(d) provides that maintenance fees may be paid without surcharge for the six-month period beginning 3, 7, and 11 years after the date of issue of patents based on applications filed on or after Dec. 12, 1980. An additional six-month grace period is provided by 35 U.S.C. 41(b) and 37 CFR 1.362(e) for payment of the maintenance fee with the surcharge set forth in 37 CFR 1.20(h), as amended effective Dec. 16, 1991. If the maintenance fee is not paid in the patent requiring such payment the patent will expire on the 4th, 8th, or 12th anniversary of the grant.

Attention is drawn to the patents which were issued on January 28, 1992 for which maintenance fees due at 3 years and six months may now be paid. The patents have patent numbers within the following ranges:

VOL 1170 ISS 5 JA 31 1995 UMI

Utility Patents 5,083,314 through 5,084,913
Reissue Patents based on the above identified patents.

Attention is drawn to the patents which were issued on January 26, 1988 for which maintenance fees due at 7 years and six months may now be paid. The patents have patent numbers within the following ranges:

Utility Patents 4,720,874 through 4,722,097
Reissue Patents based on the above identified patents.

Attention is drawn to the patents which were issued on January 24, 1984 for which maintenance fees due at 11 years and six months may now be paid. The patents have patent numbers within the following ranges:

Utility Patents 4,426,739 through 4,428,078
Reissue Patents based on the above identified patents.

No maintenance fees are required for design or plant patents.

Payments of maintenance fees in patents should be directed to "Commissioner of Patents and Trademarks, Box M. Fee, Washington, D.C. 20231."

For patents based on applications filed on or after Dec. 12, 1980, but before Aug. 27, 1982, patent owners must establish small entity status according to 37 CFR 1.27 if they have not done so and if they wish to pay the small entity amount.

The current amounts of the maintenance fees due at 3 years and six months, 7 years and six months, and 11 years and six months are set forth in 37 CFR 1.20(e)-(g), as amended Oct. 1, 1994, which are reproduced below:

37 CFR § 1.20 Post-issuance fees

(e) For maintaining an original or reissue patent, except a design or plant patent, based on an application filed on or after Dec. 12, 1980, in force beyond 4 years; the fee is due by three years and six months after the original grant:

By a small entity (§ 1.9(f)) $480.00
By other than a small entity $960.00

(f) For maintaining an original or reissue patent, except a design or plant patent, based on an application filed on or after Dec. 12, 1980 in force beyond 8 years; the fee is due by seven years and six months after the original grant:

By a small entity (§ 1.9(f)) $965.00
By other than a small entity $1,930.00

(g) For maintaining an original or reissue patent, except a design or plant patent, based on an application filed on or after Dec. 12, 1980 in force beyond 12 years; the fee is due by eleven years and six months after the original grant:

By a small entity (§ 1.9(f)) $1,450.00
By other than a small entity $2,900.00

The amount of the surcharge for paying the maintenance fee during the grace period or after expiration of the patent are set forth in 37 CFR 1.20(h), and (i) which are reproduced below:

(h) Surcharge for paying a maintenance fee during the 6 month grace period following the expiration of three years and six months, seven years and six months, and eleven years and six months after the date of the original grant of a patent based on an application filed on or after Dec. 12, 1980:

By a small entity (§ 1.9(f)) $65.00
By other than a small entity $130.00

(i) Surcharge for accepting a maintenance fee after expiration of a patent for non-timely payment of a maintenance fee where the delay is shown to the satisfaction of the Commissioner to have been:

(1) unavoidable $640.00
(2) unintentional $1,500.00

Notice of Expiration of Patents Due to Failure to Pay Maintenance Fee

35 U.S.C. 41 and 37 CFR 1.362(g) provide that if the required maintenance fee and any applicable surcharge are not paid in a patent requiring such payment, the patent will expire at the end of the 4th, 8th or 12th anniversary of the grant of the patent depending on the first maintenance fee which was not paid.

According to the records of the Office, the patents listed below have expired due to failure to pay the required maintenance fee and any applicable surcharge.

Notice of Expiration of Trademark Registrations Due To Failure to Renew

15 U.S.C. 1059 provides that each trademark registration may be renewed for periods of ten years from the end of the expiring period upon payment of the prescribed fee and the filing of an acceptable application for renewal. This may be done at any time within six months before the expiration of the period for which the registration was issued or renewed, or it may be done within three months after such expiration on payment of an additional fee.

According to the records of the Office, the trademark registrations listed below are expired due to failure to renew in accordance with 15 U.S.C. 1059.

Consent Order

Roche has entered into a Consent Order with the Federal Trade Commission with respect to the merger of a subsidiary of Roche Holdings, Inc. and Genetech, Inc. (FTC Docket No. C 3315). As part of such Consent Order, Roche has agreed to grant non-exclusive licenses upon written applications made until December 13, 2000 under its United States CD4-Based Therapeutic Patent Portfolio, which includes U.S. Patent Application Serial No. 07/510,773 - "Chimeric CD4-Immunoglobulin Polypeptides," by Klaus Karjalainen and Andre Traunecker, filed April 18, 1990. Roche is willing to grant such non-exclusive licenses to all qualified applicants at a royalty not in excess of one percent (1%) of net sales if only Process Patents are licensed, or three percent (3%) of net sales if Product Patents are licensed. The license agreement will contain other reasonable and customary terms and conditions. Copies of the FTC Consent Order and all relevant patents (as defined in the Order) are available from Roche upon written request. Any interested party should respond to:

Department of Commerce
Patent and Trademark Office

[Docket No. 941259-4359]

Request for Comments on Proposed Utility Examination Guidelines

Agency: Patent and Trademark Office, Commerce

Action: Notice and request for public comments.

Summary: The Patent and Trademark Office (PTO) requests comments from any interested member of the public on proposed internal guidelines that will be used by patent examiners in their review of patent applications for compliance with 35 U.S.C. § 101. Because these guidelines govern internal practices, they are exempt from notice and comment rulemaking under 5 U.S.C. § 553(b)(A).

Dates: Written comments on the proposed guidelines will be accepted by the PTO until February 24, 1995.

Addresses: Written comments should be addressed to the Commissioner of Patents and Trademarks, marked to the attention of Jeff Kushan. Comments submitted by mail should be sent to Commissioner of Patents and Trademarks, Box 4, Patent and Trademark Office, Washington, D.C. 20231. Comments may also be submitted by telefax at (703) 305-8885 and by electronic mail through the Internet to "comments-biotech@uspto.gov." Written comments should include the following information:

- name and affiliation of the individual responding;

- an indication of whether comments offered represent views of the respondent's organization or are the respondent's personal views; and

- if applicable, information on the respondent's organization, including the type of organization (e.g., business, trade group, university, non-profit organization) and general areas of interest.

Parties presenting written comments are requested, where possible, to provide their comments in machine readable format. Such submissions may be provided by electronic mail messages sent over the Internet, or on a 3.5" floppy disk formatted for use in either a Macintosh or MS-DOS based computer. Machine-readable submissions should be provided as unformatted text (e.g., ASCII or plain text).

I. Guidelines for Examination of Applications for Compliance with the Utility Requirement

A. Introduction

The following guidelines establish the policies and procedures to be followed by Examiners when examining applications for compliance with the utility requirement of 35 U.S.C. § 101. The guidelines also address issues that may arise during examination of applications claiming protection for inventions in the field of biotechnology and human therapy. The guidelines are accompanied by an overview of applicable legal precedent governing the utility requirement.

B. Guidelines for Examination of Applications for Compliance With 35 U.S.C. § 101

Examiners must adhere to the following procedures when examining applications for compliance with 35 U.S.C. § 101.

1. Determine what the applicant has claimed as his or her invention. This is done to:

a) ensure that the applicant has claimed statutory subject matter (e.g., a process, a machine, a composition or a manufacture); and

b) ascertain what the invention is for purposes of determining whether it is "useful."

2. Review the specification and claims to determine if the applicant has disclosed or asserted any credible utility for the claimed invention.

a) If the applicant has asserted that the claimed invention is useful for any particular purpose and that assertion would be considered credible by a person of ordinary skill in the art, the Examiner should not impose a rejection based on § 101. Credibility is to be assessed from the perspective of one of ordinary skill in the art in view of any evidence of record (e.g., data, statements, opinions, references, etc.) that is relevant to the applicant's assertions.

b) If the applicant has not asserted that the claimed invention is useful for a particular purpose but such a use would be readily apparent to a person of ordinary skill in the art, the Examiner should not impose a rejection under § 101.

3. If the applicant has not asserted any credible utility for the claimed invention or a utility would not be readily apparent to one of ordinary skill in the art, reject the claims under § 101. To be considered appropriate by the Office, a rejection under § 101 must include the following elements:

a) A prima facie showing that the claimed invention has no utility. A prima facie showing of no utility must establish that it is more likely than not that a person of ordinary skill in the art would not consider credible any utility for the claimed invention that has been asserted by the applicant. Where no utility has been asserted in the disclosure, the prima facie showing must support a finding that a person of ordinary skill would not be able to ascertain any use for the claimed invention. A prima facie showing must contain:

i) a well-reasoned statement by the Examiner that clearly sets forth the reasoning used in reaching his or her conclusions;

ii) support for factual findings relied upon by the Examiner in reaching his or her conclusions; and

iii) support for conclusions of the Examiner that evidence provided by the applicant to support an asserted utility would not be considered persuasive to a person of ordinary skill in the art.

b) Evidence that supports any factual assertions relied upon by the Examiner in establishing the prima facie showing. Whenever possible, the Examiner must provide documentary evidence that supports the factual basis of a prima facie showing of no utility (e.g., scientific or technical journals, excerpts from treatises or books, or U.S. or foreign patents). If documentary evidence is not available, the Examiner should note this fact and specifically explain the scientific basis for his or her conclusions.

4. A rejection under § 101 should not be maintained if an asserted utility for the claimed invention would be considered credible by a person of ordinary skill in the art in view of all evidence of record.

Once a prima facie showing of no utility has been properly established, the applicant bears the burden of rebutting it. The applicant can do this by amending the claims, by providing reasoning or arguments, or by providing evidence in the form of a declaration under 37 CFR § 1.132 or a printed publication, that rebuts the prima facie showing. Once a response has been received by the Examiner, he or she should review the original disclosure, any evidence relied upon in establishing the prima facie showing, any claim amendments and any new reasoning or evidence provided by the applicant in support of an asserted utility. It is essential that the Examiner recognize, fully consider and respond to each substantive element of any response to a rejection under § 101.

Examiners are reminded that they must treat as true credible statements made by an applicant or a declarant in the specification or in a declaration provided under 37 CFR § 1.132, unless they can show that one of ordinary skill in the art would have a rational basis to doubt the truth of such statements. Thus, not accepting the opinion of a qualified expert that is based on an appropriate factual record would clearly be improper.

II. Additional Information

The PTO has prepared an analysis of the law governing 35 U.S.C. § 101 to support the guidelines outlined above. Interested members of the public are invited to comment on the legal analysis as well as the guidelines. Copies of the legal analysis can be obtained from Jeff Kushan, who can be reached using the information indicated above.

Overview of Legal Precedent Governing the Utility Requirement

I. General Principles Governing Utility Rejections

The Office must examine each application to ensure compliance with the utility requirement of 35 U.S.C. § 101. In discharging this obligation, however, Examiners must keep in mind several general principles that control application of the utility requirement.

As interpreted by the Federal courts, the utility requirement has two purposes.[1] First, § 101 defines which categories of inventions are eligible for patent protection. An invention that is not a machine, an article of manufacture, a composition or a process cannot be patented.[2] Second, § 101 serves to ensure that patents are granted on only those inventions which are "useful." This second purpose has a Constitutional footing--Article I, Section 8 of the Constitution authorizes Congress to provide exclusive rights to inventors to promote the "useful arts."[3] Thus, to satisfy the requirements of § 101, an applicant must claim an invention that is statutory subject matter and must show that the claimed invention is "useful" for some purpose, either explicitly or implicitly. Application of this latter element of the utility requirement is the focus of these guidelines.

A. The Utility Requirement Requires that the Claimed Invention Have "Real World Value"

To satisfy § 101, an invention must be "useful."[4] The Court of Customs and Patent Appeals (CCPA) and other courts have used the term "practical utility" as one measure of this concept. As the court stated in *Nelson v. Bowler*:

> "Practical utility" is a shorthand way of attributing "real-world" value to claimed subject matter. In other words, one skilled in the art can use a claimed discovery in a manner which provides some immediate benefit to the public.[5]

Examiners must be careful not to interpret the phrase "immediate benefit to the public" or similar formulations in other cases[6] to mean that products or services based on the claimed invention must be "currently available" to the public in order to satisfy § 101. Rather, the Examiner should accept as sufficient *any* reasonable use that an applicant has identified for the invention that can be viewed as providing a public benefit.

B. Wholly Inoperative Inventions Are Not "Useful" Inventions under 35 U.S.C. § 101; "Incredible" Utility

An invention that is inoperative (e.g., the invention does not operate to produce the results claimed by the patent applicant) is not a "useful" invention in the meaning of the patent law.[7] However, as the Federal Circuit has stated, "[t]o violate § 101 the claimed device must be *totally incapable of achieving a useful result*."[8] If an invention is only *partially* successful in achieving a useful result, a rejection of the claimed invention as a whole under § 101 is *not* appropriate.[9]
Cases decided by a Federal court in which a claimed invention was held to lack utility under § 101 because it was "inoperative"

VOL 1170 ISS 5 JA 31 1995 UMI

have been rare. Uniformly, in these cases the utility asserted by the applicant was "incredible in the light of knowledge of the art, or factually misleading"[10] when initially considered by the Examiner.
Examples include: an invention asserted to change the taste of food using a magnetic field,[11] a perpetual motion machine,[12] a method for increasing the energy output of fossil fuels upon combustion through exposure to a magnetic field,[13] uncharacterized compositions for curing cancer[14] and a method of restoring hair growth.[15] In view of the rare nature of such cases, Examiners should not label an asserted utility "incredible" unless it is clearly appropriate to do so.

C. Therapeutic or Pharmacological Utility[16]

Inventions asserted to have utility in the treatment of human or animal disorders are subject to the same legal requirements for utility as inventions in any other field of technology.[17] As such, pharmacological or therapeutic inventions that provide *any* "immediate benefit to the public" satisfy § 101.
Courts have repeatedly found that the mere *identification* of a pharmacological activity of a compound relevant to an asserted pharmacological use provides an "immediate benefit to the public" and thus satisfies § 101.[18] As the CCPA held in *Nelson v. Bowler*:

> Knowledge of the pharmacological activity of any compound is obviously beneficial to the public. It is inherently faster and easier to combat illnesses and alleviate symptoms when the medical profession is armed with an arsenal of chemicals having known pharmacological activities. Since it is crucial to provide researchers with an incentive to disclose pharmacological activities in as many compounds as possible, we conclude that adequate proof of any such activity constitutes a showing of practical utility.[19]

Similarly, courts have found utility despite that fact that an applicant is at a very early stage in the development of a pharmaceutical product or therapeutic regimen based on a claimed pharmacological or bioactive compound or composition.[20] Accordingly, Examiners should not construe § 101, under the logic of "practical" utility or otherwise, as requiring an applicant to demonstrate that a therapeutic agent based on a claimed invention is a safe or fully effective drug for humans.[21]
These general principles are equally applicable to situations where an applicant has claimed a process for treating a human or animal disorder. In such cases, the asserted utility is usually clear--the invention is asserted to be useful in treating the particular disorder. If the asserted utility is *credible*,[22] there is no basis for an Examiner to challenge such a claim on the grounds that it lacks utility under § 101.

II. Procedural Considerations Related to Rejections for Lack of Utility

A. The Claimed Invention is the Focus of the Utility Requirement

As noted above, the *claimed* invention is the focus of the assessment of whether an applicant has satisfied the utility requirement of § 101. Statements made by the applicant in the specification or incident to prosecution of the application before the Office cannot, standing alone, be the basis for a rejection under § 101.[23]
It is common for an applicant to identify several uses for an invention, particularly where the invention is a product (e.g., a machine, an article of manufacture or a composition of matter). However, irrespective of the category of invention that is claimed (e.g., product or process), an applicant need only disclose *one credible utility* for the claimed invention to satisfy § 101.[24] If *one* asserted utility is credible, utility for the claimed invention *as a whole* is established.[25]
Examiners should be especially careful not to read into a claim unclaimed results, limitations or embodiments of an invention.[26] Doing so can inappropriately change the relationship of an asserted utility to the claimed invention and raise issues not relevant to examination of that claim.

B. Is There an Asserted or Readily Apparent Utility for the Claimed Invention?

After identifying what the claimed invention is, the Examiner should review the specification to ascertain if there are any statements asserting that the claimed invention is useful for any particular purpose. A complete disclosure should include a statement which identifies a specific utility for the invention. Such statements can be detailed statements of why an invention is believed to be useful by the applicant. They can also take the form of more general assertions of useful applications of the invention.
Some degree of specificity is needed in identifying utility. For example, a statement that a composition has an unspecified "biological activity" without any explanation of why the composition with that activity would be considered useful should not be viewed as a specific assertion of utility.[27]
If the Examiner cannot find any statements asserting utility for the claimed invention in the specification, he or she should then query whether a utility would be readily apparent to a person of ordinary skill from either the disclosure or from the characteristics of the invention. The result of this initial evaluation determines the next step for the Examiner in the review for compliance with utility.

1. An Asserted Utility Creates a Presumption of Utility

An applicant's assertion of utility creates a presumption of utility that will be sufficient, *in most cases*, to satisfy the utility requirement of 35 U.S.C. § 101.[28] As the CCPA stated in *In re Langer*:

> As a matter of Patent Office practice, a specification which contains a disclosure of utility which corresponds in scope to the subject matter sought to be patented *must* be taken as sufficient to satisfy the utility requirement of § 101 for the entire claimed subject matter *unless* there is a reason for one skilled in the art to question the objective truth of the statement of utility or its scope.[29]

To overcome this presumption, the Examiner must establish that it is more likely than not that one of ordinary skill in the art would doubt the truth of the statement of utility.[30] In other words, the Examiner must show that the asserted utility is not *credible*.

2. When is an Asserted Utility Not "Credible"?

Compliance with § 101 is a question of fact.[31] Where an applicant has specifically asserted that an invention has a particular utility, that assertion cannot simply be dismissed by an Examiner as being "wrong," even when the Examiner may believe the assertion is not accurate beyond a reasonable doubt. Rather, the Examiner must determine if the assertion of utility is *credible*. If it is, the Examiner should not reject the claimed invention under § 101.
To assess credibility, the Examiner should determine if one of ordinary skill in the art would consider the assertions of the applicant to have *any* reasonable scientific basis. If they do, they should not be challenged as not being credible. Only where they do not (e.g., if the assertion is "incredible in view of contemporary knowledge"), should the Examiner challenge the statement as not being credible. In making credibility determinations, the Examiner must consider the full record of evidence related to the asserted utility, including any data and reasoning provided by the applicant in the specification and any references cited by the applicant to support utility. The Examiner must also consider information that is generally known in the art regarding the asserted utility.
As noted above, rejections under § 101 have been rarely sustained by Federal courts. Generally speaking, in these rare cases, the § 101 rejection was sustained because the applicant asserted a utility that could only be true if it violated a scientific principle, such as the second law of thermodynamics, or a law of nature, or was *wholly* inconsistent with contemporary knowledge in the art.[32] The phrase "incredible utility" has come to be associated with such cases. "Incredible utility," however, is a *conclusion, not a starting point for analysis under § 101*. A conclusion that an asserted utility is "incredible" thus can

be reached only after the Examiner has evaluated both the assertions of the applicant regarding utility *and* any evidentiary basis for those assertions. An Examiner should be particularly careful not to start with the presumption that an asserted utility is *per se* "incredible" and then proceed to base a rejection under § 101 on that presumption.
Special care should be taken when assessing the credibility of an asserted therapeutic utility for a claimed invention. In such cases, a previous lack of success in treating a disease or condition, or the absence of a proven animal model for testing the effectiveness of drugs for treating a disorder in humans, should *not*, standing alone, serve as a basis for challenging the asserted utility under § 101.

3. No Statement of Utility for the Claimed Invention in the Specification Does Not Negate Utility

Occasionally, an applicant will not explicitly state in the specification or otherwise assert a specific utility for the claimed invention. In such cases, if a person of ordinary skill would recognize a utility for the claimed invention if provided with the specification at the time of its filing, no rejection under § 101 should be imposed.[33] For example, if an application teaches the cloning and characterization of the nucleotide sequence of a well-known protein such as insulin, and those skilled in the art at the time of filing knew that insulin had a well-established use, it would be improper to reject the claimed invention as lacking utility under § 101.

C. Initial Burden is on the Examiner to Establish *Prima Facie* Case and Provide Evidentiary Support Thereof

To properly reject a claimed invention under 35 U.S.C. § 101, the Examiner must (a) make a *prima facie* showing that the claimed invention lacks utility, and (b) provide a sufficient evidentiary basis for factual assumptions relied upon in establishing the prima facie showing.[34] If the Examiner cannot develop a proper *prima facie* case and provide evidentiary support for a rejection under § 101, a rejection on this ground should not be imposed.[35]
The *prima facie* showing must be set forth in a well-reasoned statement. In the statement, the Examiner must articulate sound reasons why a person of ordinary skill in the art would conclude that it is *more likely than not* that an asserted utility is not *credible* or that one of ordinary skill would not recognize utility for the claimed invention if unstated. The statement should specifically identify the scientific basis of the Examiner's conclusions. The statement must also explain why any evidence of record that supports the asserted utility would not be persuasive to one of ordinary skill.
In addition to the statement setting forth the *prima facie* showing, the Examiner must provide evidentiary support for the *prima facie* case. In most cases, the Examiner can and should provide documentary evidence (e.g., articles in scientific journals, or excerpts from patents or scientific treatises) that supports his or her factual conclusions. Only when documentary evidence is not readily available should the Examiner attempt to satisfy the Office's requirement for evidentiary support for the factual basis of the *prima facie* showing *solely* through an explanation of relevant scientific principles.
It is imperative that Examiners use specificity in setting forth an initial rejection under § 101 and support their factual conclusions. For example, the Examiner should explain why any *in vitro* or *in vivo* data supplied by the applicant would not be reasonably predictive of an asserted therapeutic utility from the perspective of a person of ordinary skill in the art. By using specificity, the applicant will be able to identify the assumptions made by the Examiner in setting forth rejection and will be able to address those assumptions properly.

D. Evidentiary Requests by an Examiner to Support an Asserted Utility

As the courts have recognized, in appropriate situations the Office may require an applicant to substantiate an asserted utility for a claimed invention.[36] However, requests for additional evidence should be imposed rarely, and *only* if necessary to support the scientific credibility of the asserted utility (*e.g.*, if the asserted utility is not consistent with the evidence of record and current scientific knowledge). As the CCPA stated in *In re Isaacs*, "it is clearly improper for the Examiner to make a demand for further test data, which as evidence would be essentially redundant and would seem to serve for nothing except perhaps to unduly burden the applicant.[37] Whenever possible, Examiners should identify the nature of evidence which, if provided, would be persuasive in establishing the credibility of an asserted utility.

E. Consideration of a Response to a *Prima Facie* Rejection for Lack of Utility

If an Examiner has properly rejected a claimed invention under § 101, the burden shifts to the applicant to rebut the *prima facie* showing.[38] An applicant can do this using any combination of the following: amendments to the claims, arguments or reasoning, or new evidence[39] submitted in an declaration under 37 CFR § 1.132, or in a printed publication.
Once a response has been provided, the Examiner must review the complete record, including the claims, to determine if it is appropriate to maintain the rejection under § 101. If the record as a whole would make it more likely than not that the asserted utility for the claimed invention would be considered credible by a person of ordinary skill in the art, the Examiner should not maintain the rejection.[40] If the Examiner concludes otherwise, he or she should maintain the rejection under § 101.

F. Evaluation of Evidence Related to Utility

There is no predetermined amount or character of evidence that must be provided by an applicant to support an asserted utility, therapeutic or otherwise. Rather, the character and amount of evidence needed to support an asserted utility will vary depending on what is claimed,[41] and whether the asserted utility appears to contravene established scientific principles and beliefs.[42] Furthermore, the applicant does *not* have to provide evidence sufficient to establish that an asserted utility is true "beyond a reasonable doubt."[43] Nor must an applicant provide evidence such that it establishes an asserted utility as a matter of statistical certainty.[44] Instead, evidence will be sufficient if, considered as a whole, it leads a person of ordinary skill in the art to conclude that the asserted utility is *more likely than not true*.

III. Special Considerations for Asserted Therapeutic or Pharmacological Utilities

The Federal courts have consistently reversed rejections by the Office asserting a lack of utility under § 101 for inventions claiming a pharmacological or therapeutic utility where an applicant has provided evidence supporting such a utility. In view of this, Examiners should be particularly careful in their review of evidence provided in support of an asserted therapeutic or pharmacological utility.

A. A Reasonable Correlation Between Evidence and Asserted Utility is Sufficient

As a general matter, evidence of pharmacological or other biological activity of a compound will be relevant to an asserted therapeutic use if there is a *reasonable* correlation between the activity in question and the asserted utility.[45] The applicant does not have to prove that there is a statistically proven correlation between characteristics of a compound and the asserted use, nor does he or she have to provide actual evidence of success in treating humans where such a utility is asserted.

B. Structural Similarity to Useful Products

The courts have on several occasions found evidence of structural similarity to known compounds with particular therapeutic or pharmacological uses as supporting therapeutic utility of a newly claimed compound.[46] Such evidence, when provided by an applicant in support of an assertion of utility, should be given appropriate weight in determining whether one skilled in the art would find the asserted utility credible.

C. Data from *In Vitro* and Animal Testing is Generally Sufficient to Support Therapeutic Utility

VOL 1170 ISS 5 JA 31 1995 UMI

Data generated using *in vitro* assays and testing in animals almost invariably will be sufficient to support an asserted therapeutic or pharmacological utility.[47] In *no* case has a Federal court required an applicant to support an asserted utility with data from human clinical trials.

If an applicant provides data from *in vitro* and animal tests to support an asserted utility, the Examiner should determine if the tests, including the test parameters and choice of animal, would be viewed by one skilled in the art as being reasonably predictive of the asserted utility.[48] If so, and the data supplied is consistent with the asserted utility, the Examiner should not maintain a rejection under § 101. This approach is to be followed not only in cases where there are art-recognized animal models for assessing utility in human disease and treatment, but also where no such validation of a specific test has been performed. Thus, if one skilled in the art would accept the animal tests as being *reasonably predictive* of utility in humans, they should be considered sufficient to support the credibility of the asserted utility.[49] Examiners should be careful not to find evidence unpersuasive simply because no animal model for the human disease condition had been established prior to the filing of the application.[50]

D. Human Clinical data

There is no decisional law that requires an applicant to provide data from human clinical trials to establish utility for an invention related to treatment of human disorders,[51] even with respect to situations where no art-recognized animal models existed for the human disease encompassed by the claims.[52] Examiners should not impose on applicants the unnecessary burden of providing evidence from human clinical trials. Examiners should note that before a drug can *enter* human clinical trials, the sponsor (e.g., often the applicant) must establish a sufficient basis to those *especially* skilled in the art (e.g., the Food and Drug Administration) that the drug will be effective to some degree in treating the stated disorder. *Thus, as a general rule, if an applicant has initiated human clinical trials for a product or process used for treating an indication, the subject of that trial has met the burden of being reasonably predictive of utility.*

E. Safety and Efficacy Considerations

The Examiner must confine his or her examination, for purposes of utility, to compliance with the statutory requirements of the patent law. Other agencies of the government have been assigned the responsibility of ensuring conformance to standards established by statute for the advertisement, use, sale or distribution of drugs.[53] Thus, while an applicant may on occasion need to provide evidence to show that an invention will work as claimed, it is improper for an Examiner to request evidence of safety in the treatment of humans, or regarding the *degree* of effectiveness.[54]

F. Treatment of Specific Disease Conditions

Claims directed to a method of treating or curing a disease for which there have been no previously successful treatments or cures warrant careful review for compliance with § 101.[55] The mere fact that there is no known cure for a disease, however, should not serve as the basis of an Examiner's conclusion that such an invention lacks utility. Rather, the Examiner should only reject the claims under § 101 if he or she can establish a *prima facie* case that the asserted utility is not *credible*.

In such cases, the Examiner should carefully review what is being claimed by the applicant. An assertion that the claimed invention is useful in treating a symptom of an incurable disease may be considered scientifically credible by a person of ordinary skill in the art on the basis of a fairly modest amount of evidence or support. In constrast, an assertion that the claimed invention will be useful in "curing" the disease may require a significantly greater amount of evidentiary support to be considered scientifically credible by a person of ordinary skill in the art.[56]

In these cases, it is important to note that the Food and Drug Administration has promulgated regulations that enable a party to conduct clinical trials for drugs used to treat life threatening and severely-debilitating illnesses, even where no alternative therapy exists.[57] Implicit in these regulations is the recognition that experts qualified to evaluate the effectiveness of therapeutics can and often do find a sufficient basis to conduct clinical trials of drugs for "incurable" or previously untreatable illnesses. Thus, affidavit evidence from experts in the art indicating that there is a reasonable expectation of success, supported by sound reasoning, usually should be sufficient to establish that such a utility is *credible*.

[1] The utility requirement is found in section 101 of title 35, United States Code, which reads:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

[3] *See Carl Zeiss Stiftung v. Renishaw PLC*, 945 F.2d 1173, 20 USPQ2d 1094 (Fed. Cir. 1991).

[4] Courts have recognized that the term "useful" used with reference to the utility requirement can be a difficult term to define. *Brenner v. Manson*, 383 U.S. 519, 529, 148 USPQ 689, 693 (1966) (simple everyday word like "useful" can be "pregnant with ambiguity when applied to the facts of life."). Despite this, courts readily find inventions "useful." For example, in *Nelson v. Bowler*, 626 F.2d 853, 206 USPQ 881 (CCPA 1980), the CCPA held that a composition was "useful" because it had been shown to possess a particular pharmacological activity.

Berkley and Co.*, 620 F.2d 1247, 1260 n.17, 205 USPQ 1, 10 n.17 (8th Cir. 1980) ("A small degree of utility is sufficient. The claimed invention must only be capable of performing some beneficial function...An invention does not lack utility merely because the particular embodiment disclosed in the patent lacks perfection or performs crudely...A commercially successful product is not required... Nor is it essential that the invention accomplish all its intended functions...or operate under all conditions....partial success being sufficient to demonstrate patentable utility...In short, the defense of nonutility cannot be sustained without proof of total incapacity" [citations omitted].).

[9] In such cases, a rejection under 35 U.S.C. § 112 may be appropriate. *See, In re Gardner*, 475 F.2d 1389, 177 USPQ 396 (CCPA), *reh'g denied*, 480 F.2d 879 (CCPA 1973); *In re Marzocchi*, 439 F.2d 220, 169 USPQ 367 (CCPA 1971).

[16] The CCPA in *Nelson* used the term "pharmacological" utility. Examiners should rely on the guidance of *Nelson* and other cases in evaluating therapeutic, prophylactic, or pharmacological utility.

[17] *In re Chilowsky*, 229 F.2d 457, 461-2, 108 USPQ 321, 325 (CCPA 1956) ("There appears to be no basis in the statutes or decisions for requiring any more conclusive evidence of operativeness in one type of case than another. The character and amount of evidence needed may vary, depending on whether the alleged operation described in the application appears to accord with or to contravene established scientific principles or to depend upon principles alleged but not generally recognized, but the degree of certainty as to the ultimate fact of operativeness or inoperativeness should be the same in all cases"); *In re Gazave*, 379 F.2d 973, 978, 154 USPQ 92, 96 (CCPA 1967) ("Thus, in the usual case where the mode of operation alleged can be readily understood and conforms to the known laws of physics and chemistry, operativeness is not questioned, and no further evidence is required.")

[18] In *Nelson v. Bowler*, the CCPA addressed the practical utility requirement in the context of an interference proceeding. Bowler challenged the patentability of the invention claimed by Nelson on the basis that Nelson had failed to sufficiently and persuasively disclose in his application a practical utility for the invention. Nelson had developed and claimed a class of synthetic prostaglandins modeled on naturally occurring prostaglandins. Naturally occurring prostaglandins are bioactive compounds that, at the time of Nelson's application, had a recognized value in pharmacology (e.g., the stimulation of uterine smooth muscle which resulted in labor induction or abortion, the ability to raise or lower blood pressure, etc.). To support the utility he identified in his disclosure, Nelson included in his application the results of tests demonstrating the bioactivity of his new substituted prostaglandins relative to the bioactivity of naturally occurring prostaglandins. The Court concluded that Nelson had satisfied the practical utility requirement in identifying the synthetic prostaglandins as pharmacologically active compounds. In reaching this conclusion, the court considered and rejected arguments advanced by Bowler that attacked the evidentiary basis for Nelson's assertions that the compounds were pharmacologically active.

In *In re Jolles*, 628 F.2d 1322, 206 USPQ 885 (CCPA 1980), an inventor claimed protection for pharmaceutical compositions for treating leukemia. The active ingredient in the compositions was a structural analog to a known anti-cancer agent. The applicant provided evidence showing that the claimed analogs had the same general pharmaceutical activity as the known anti-cancer agents. The Court reversed the Board's finding that the asserted pharmaceutical utility was "incredible," pointing to the evidence that showed the relevant pharmacological activity.

In *Cross v. Iizuka*, 753 F.2d 1040, 224 USPQ 739 (Fed. Cir. 1985), the Federal Circuit affirmed a finding by the Board of Patent Appeals and Interferences that a pharmacological utility had been disclosed in the application of one party to an interference proceeding. The invention that was the subject of the interference count was a chemical compound used for treating blood disorders. Cross had challenged the evidence in Iizuka's specification that supported the claimed utility. However, the Federal Circuit relied extensively on *Nelson v. Bowler* in finding that Iizuka's application had sufficiently disclosed a pharmacological utility for the compounds. It distinguished the case from cases where an only a generalized "nebulous" expression, such as "biological properties," had been disclosed in a specification. Such statements, the court held, "convey little explicit indication regarding the utility of a compound," 753 F.2d at 1048, 224 USPQ 745 (citing *In re Kirk*, 376 F.2d 936, 941, 153 USPQ 48, 52 (1967)).

[20] The Federal Circuit, in *Cross v. Iizuka*, 753 F.2d 1040, 1051, 224 USPQ 739, 747-748 (Fed. Cir. 1985), commented on the significance of data from *in vitro* testing that showed pharmacological activity:

We perceive no insurmountable difficulty, under appropriate circumstances, in finding that the first link in the screening chain, *in vitro* testing, may establish a practical utility for the compound in question. Successful *in vitro* testing will marshal resources and direct the expenditure of effort to further in vivo testing of the most potent compounds, thereby providing an immediate benefit to the public, analogous to the benefit provided by the showing of an *in vivo* utility.

[32] *In re Gazave*, 379 F.2d 973, 978, 154 USPQ 92, 96 (CCPA 1967), provides a good perspective on rejections for lack of utility. In reversing the Board's rejection for lack of utility where the applicant had asserted a specific utility, the CCPA held:

Appellant's discovery here does not appear to us to be of such a "speculative," abstruse or esoteric nature that it must inherently be considered unbelievable, "incredible," or "factually misleading." Nor does operativeness appear "unlikely" or an assertion thereof appear to run counter "to what would be believed would happen by the ordinary person" in the art. Nor does appellant's field of endeavor appear to be one where "little of a successful nature has been developed" or one which "from common knowledge has long been the subject matter of much humbuggery and fraud." Nor has the examiner presented evidence inconsistent with the assertions and evidence of operativeness presented by appellant.

After evidence or argument is submitted by the applicant in response, patentability is determined on the totality of the record, by a preponderance of evidence with due consideration to persuasiveness of argument.").

[39] New evidence provided by an applicant must be relevant to the issues raised in the rejection. For example, declarations in which conclusions are set forth without establishing a nexus between those conclusions and the supporting evidence, or which merely express opinions, may be of limited probative value with regard to rebutting a *prima facie* case. *In re Grunwell*, 609 F.2d 486, 203 USPQ 1055 (CCPA

[40] As the CCPA stated in reference to review of an applicant's response to a *prima facie* showing of obviousness in *In re Rinehart*, 531 F.2d 1048, 1052, 189 USPQ 143, 147 (CCPA 1976):

> When prima facie obviousness is established and evidence is submitted in rebuttal, the decision-maker must start over... An earlier decision should not, as it was here, be considered as set in concrete, and applicant's rebuttal evidence then be evaluated only on its knockdown ability. Analytical fixation on an earlier decision can tend to provide that decision with an undeservedly broadened umbrella effect. Prima facie obviousness is a legal conclusion, not a fact. Facts established by rebuttal evidence must be evaluated along with the facts on which the earlier conclusion was reached, not against the conclusion itself... [S]uch finding will rest upon evaluation of all facts in evidence, uninfluenced by any earlier conclusion reached by an earlier board upon a different record.

[41] In *Ex parte Ferguson*, 117 USPQ 229 (Bd. App. 1957), the applicant asserted that a drug would provide relief from the pain of ulcers. The Examiner rejected the claims on the basis that the applicant had not shown that the drug was effective in curing ulcers. The Board reversed the Examiner and indicated that the evidence necessary to support the asserted utility merely had to demonstrate that the subjects felt better after using the drug.

The court pointed out that a rigorous correlation is not necessary when the test is reasonably predictive of the response).

[45] *Cross v. Iizuka*, 753 F.2d 1040, 224 USPQ 739 (Fed. Cir. 1985); *In re Jolles*, 628 F.2d 1322, 206 USPQ 885 (CCPA 1980); *Nelson v. Bowler*, 626 F.2d 853, 206 USPQ 881 (CCPA 1980).

[46] In *In re Jolles*, 628 F.2d 1322, 206 USPQ 885 (CCPA 1980), the claimed compounds were found to have utility based on a close structural relationship to daunorubicin and doxorubicin, both of which were known to be useful in cancer chemotherapy. The evidence of close structural similarity with the known compounds was presented in conjunction with evidence demonstrating substantial activity of the claimed compounds in animals customarily employed for screening anti-cancer agents.

[47] The CCPA has sustained rejections under § 101 for a claimed therapeutic utility *in only two instances*. *In re Citron*, 325 F.2d at 253, 139 USPQ at 520 (therapeutic utility for an uncharacterized biological extract not supported or scientifically credible); *In re Buting*, 418 F.2d 540, 543, 163 USPQ 689, 690 (CCPA 1969) (confusing lack of enablement under § 112 for range of species claimed for lack of utility of claimed invention as a whole under § 101 because record did not establish a credible basis for the assertion that the single class of compounds in question would be useful in treating disparate types of cancers). In contrast, in the vast majority of cases where § 101 was the basis of a rejection, the courts have relied on a varying combination of data from *in vitro* and animal testing, and from structural similarities to known compounds to find credible an asserted utility. *See, e.g., Cross v. Iizuka*, 753 F.2d 1040, 224 USPQ 739 (Fed. Cir. 1985); *In re Jolles*, 628 F.2d 1322, 206 USPQ 885 (CCPA 1980); *Nelson v. [48] *See, e.g., Ex parte Maas*. 9 USPQ2d 1746 (Bd. Pat. App. & Inter. 1987); *Ex parte Balzarini*, 21 USPQ2d 1892 (Bd. Pat. App. & Inter. 1991).

[49] A number of decisions have addressed the question of whether animal data provide sufficient evidence of utility.

In *In re Hartop*, 311 F.2d 249, 135 USPQ 419 (CCPA 1962), the applicant submitted affidavit evidence that the compound tested successfully for therapeutic effectiveness and acute toxicity in the "standard experimental animal". The court held that "inherent in the concept of the 'standard experimental animal' is the ability of one skilled in the art to make the appropriate correlation between the results actually observed with the animal experiments and the probable results in human therapy". Therefore, the court concluded that appellants' claimed solutions were useful within the meaning of 35 U.S.C. § 101".

In *In re Krimmel*, 292 F.2d 948, 130 USPQ 215 (CCPA 1961), the court held that when the specification teaches the use of the claimed compound for the treatment of any animal, and is not limited to the treatment of humans, and when statistically significant tests with "standard experimental animals" establish that the compound exhibits a useful pharmaceutical property, sufficient statutory utility for the compound has been presented. The court defined "standard experimental animals" as "whatever animal is usually used by those skilled in the art to establish the particular pharmaceutical application in question." 292 F.2d at 953, 130 USPQ at 219.

In *Ex parte Krepelka*, 231 USPQ 746 (Bd. Pat. App. & Inter. 1986), the Board reversed the Examiner's rejection under 35 U.S.C. § 101 that claims drawn to compounds asserted to be useful in treating human cancer were "incredible" and thus lacked patentable utility. The Examiner did not support the assertions with any evidence to controvert evidence in the applicant's disclosure. The evidence in the disclosure included test results derived from acceptable experimental animals, *i.e.*, results from animals which were known to correlate with pharmacological effects observed in humans, were sufficient to demonstrate the utility of the claimed compounds.

[50] Lack of an appropriate animal model to assess effectiveness of a drug or a treatment modality should not itself preclude a finding that an invention has utility. *See, In re Chilowsky*, 229 F.2d at 461, 108 USPQ at 325 ("The mere fact that something has not previously been done clearly is not, in itself, a sufficient basis for rejecting all applications purporting to disclose how to do it."); *In re Wooddy*, 331 F.2d 636, 639, 141 USPQ 518, 520 (CCPA 1964) ("It appears that no one on earth is certain as of the present whether the process claimed will operate in the manner claimed. Yet absolute certainty is not required by the law. The mere fact that something has not previously been done clearly is not, in itself, a sufficient basis for rejecting all applications purporting to disclose how to do it").

[51] Indeed, in *In re Isaacs*, 347 F.2d 889, 146 USPQ 193 (1963), the CCPA stated:

> No authority has been cited and we have been able to find none which requires that in order to secure a patent, utility of a pharmacologically active substance must be proved by in vivo testing. The mere fact that the claimed invention may have possible utility *in vivo* does not warrant disregard of *in vitro* activity where the claims are not limited to in vivo use [347 F.2d at 889, 146 USPQ at 195].

Similarly, in *In re Langer*, 503 F. 2d at 1393-94, the CCPA, after considering the evidence relied upon by the Office in imposing a § 101 rejection stated:

> It is not proper for the Patent Office to require clinical testing in humans to rebut a prima facie case for lack of utility when the pertinent references which establish the prima facie case show in vitro tests and when they do not show in vivo tests employing standard experimental animals.

[52] In *Ex parte Balzarini*, 21 USPQ2d 1892 (Bd. Pat. App. & Inter. 1991) (human clinical data is not required to demonstrate the utility of the claimed invention, even though those skilled in the art might not accept other evidence to establish the efficacy of the claimed therapeutic compositions and the operativeness of the claimed methods of treating humans).

[53] Congress has created a special agency to determine both the safety, and the effectiveness, of new drugs. That agency is the Food and Drug Administration (FDA). According to 21 U.S.C. § 355(a), in order to introduce any new drug, an individual must obtain approval of an application filed with the FDA. The statute defines "drug" extremely broadly and defines "new drug" as any drug not generally recognized as both safe and effective for the use suggested. *See* 35 U.S.C. §§ 321(g) and (p). Under the FDA, the clinical investigation of a new drug is divided into three distinct phases. The general principles of new drug investigations require the agency to assess the likelihood that the drug will meet the statutory standards for marketing approval before granting approval of these phases. 21 CFR § 312.22(a). Part of these statutory standards include the requirement that the drug *prove effective*, a higher standard than the utility requirement. 21 U.S.C. § 355(a), 21 CFR § 314.105. *Cf. In re Irons*, 340 F.2d 974, 978, 144 USPQ 351,354 (CCPA 1965) (reversing the Board of Appeals' utility rejection and pointing out that proof with a double blind-test even where the art recognized a very significant placebo effect-amounted to proof beyond a reasonable doubt, which was not required to comply with 35 U.S.C. § 101). Indeed, the simple request to begin testing the drug requires submission of an explanation of the rationale for the research, as well as information relating to the effectiveness of the drug. 21 CFR §§ 312.23 (a) (3) (iv), (5) (iv), (8) (i), and (9) (i). Thus, the FDA pursues a two-prong test to provide approval for testing. Under that test, an applicant must show the drug is not injurious to health and that there is a reasoned expectation to think the drug will actually work. As a review matter, there must be a rational reason to think that the compound will actually be effective.

If the use approved by the FDA is not set forth in the specification, FDA approval may not satisfy 35 U.S.C. § 101. However, if the approved use is one set forth in the specification, the Examiner must be extremely hesitant to challenge utility. In such a situation, the inventor has signed an oath stating a utility (*i.e.*, the application) and experts at the FDA have assessed the likelihood that the drug will be effective for the utility indicated and found it satisfactory. Thus, in challenging utility, the examiner is at odds with those experts designated by Congress to decide the issue and who have assessed the likelihood that the drug will meet the statutory standards of efficacy.

[55] The credibility of an asserted utility for treating a human disorder may be more difficult to establish where current scientific understanding suggests that the such a task would be impossible. Such a determination has always required a good understanding of the state of the art at the time of the invention. For example, in the 1960s, there were a number of cases where an asserted use in treating cancer in humans was viewed as "incredible." *In re Jolles*, 628 F.2d 1322, 206 USPQ 885 (CCPA 1980); *In re Buting*, 418 F.2d 540, 163 USPQ 689 (CCPA 1969); *Ex parte Stevens*, 16 USPQ2d 1379 (Bd. SPECIAL BOXES FOR PATENT MAIL

Special box designations should be used to allow forwarding of particular types of mail to the appropriate areas as quickly as possible. Such mail is forwarded to the appropriate area without being opened. Only the specified type of document should be placed in an envelope addressed to one of these special boxes. If any documents other than the specified type identified for each special box are addressed to that box, they will be significantly delayed in reaching the appropriate area for which they are intended.

Please address mail as follows:

Box _____
Commissioner of Patents and Trademarks
Washington, D.C. 20231

Box Designations	Explanation
Box 7	Reissue applications for patents involved in litigation and subsequently filed related papers.
Box 12	Contributions to the Examiner Education Program.
Box 313b	Petitions under 37 CFR 1.313(b) to withdraw a patent application from issue after payment of the issue fee and any papers associated with the petition, including papers necessary for filing a continuing application.
Box AF	Expedited procedure for processing amendments and other responses after final rejection.
Box DAC	Petitions decided by the Office of Petitions including petitions to revive and petitions to accept late payment of issue fees or maintenance fees.
Box DD	Disclosure Documents or material related to the Disclosure Document Program.
Box FWC	Requests for File Wrapper Continuation Applications (under 37 CFR 1.62).
Box Interference	Communications relating to interferences and applications and patents involved in interference.
Box Issue Fee	All communications following the receipt of a PTOL–85, "Notice of Allowance and Issue Fee Due," and prior to the issuance of a patent should be addressed to Box Issue Fee, unless advised to the contrary. Assignments are the exception. Assignments should be submitted in a separate envelope and not be sent to Box Issue Fee.
Box M Fee	Correspondence related to a patent that is subject to the payment of a maintenance fee.
Box MPEP	Submissions concerning the Manual of Patent Examining Procedures.
Box Non-Fee-Amendment	Non-fee amendments to patent applications. (Use Box AF for responses after final rejection).
Box PATENT APPLICATION	New patent application and associated papers and fees.
Box Pat. Ext.	Applications for patent term extension.
Box PCT	Mail related to applications filed under the Patent Cooperation Treaty.
Box Reconstruction	Correspondence pertaining to the reconstruction of lost patent files.
Box Reexam	Requests for Reexamination for *original* request papers *only*.
Box Sequence	Submission of diskette for biotechnical application.
Box SN	For fee and petitions under 37 CFR 1.182 to obtain date received and/or serial number for patent applications *prior* to the Office's standard notification (return postcard or the official "Filing Receipt," "Notice to File Missing Parts," or "Notice of Incomplete Application").

SPECIAL BOXES FOR TRADEMARK MAIL

Special box designations should be used to allow forwarding of particular types of trademark mail to the appropriate areas as quickly as possible. In addition to these box designations, filers are encouraged to indicate whether the contents of the envelope contain a fee. Envelopes containing a fee should be marked "FEE;" envelopes not containing a fee should be marked "NO FEE." Box designations and "FEE/NO FEE" indicators should appear on the envelope as well as on the cover sheet or first page of any document.

Please address mail as follows:

Box _____
FEE (or "NO FEE")
Assistant Commissioner for Trademarks
2900 Crystal Drive
Arlington, Virginia 22202-3513

Box Designations	Explanation
Box NEW APP FEE	New trademark applications and fees.

Box EEO	Mail for the Office of Civil Rights.
Box OED	Mail for the Office of Enrollment and Discipline.

Reference Collections of U.S. Patents and Trademarks Available for Public Use in Patent and Trademark Depository Libraries

The following libraries, designated as Patent and Trademark Depository Libraries (PTDLs), receive patent and trademark information in various formats from the U.S. Patent and Trademark Office. Many PTDLs have on file all full-text patents issued since 1790, trademarks published since 1872, and select collections of foreign patents. All PTDLs have both the patent and trademark sections of the *Official Gazette of the U.S. Patent and Trademark Office*. The full-text utility and design patents are distributed numerically on 16 mm microfilm, and plant patents on color microfiche. Patent and trademark search systems on CD-ROM (Compact Disc-Read Only) format are available at all PTDLs to increase utilization of and enhance access to the information found in patents and trademarks. It is through the CD-ROM systems that preliminary patent and trademark searches can be conducted through the numerically arranged collections.

All information is available for use by the public free of charge.

In addition, each PTDL offers reference publications which outline and provide access to the patent and trademark classification systems, as well as other documents and publications which supplement the basic search tools. PTDLs provide technical staff assistance in using all materials. Facilities for making paper copies of patent and trademark information are generally provided for a fee.

Since there are variations in the scope of patent and trademark collections among the PTDLs, and their hours of service to the public vary, anyone contemplating use of these collections at a particular library is urged to contact that library in advance about its collections, services, and hours in order to avert possible inconvenience.

MARKS PUBLISHED FOR OPPOSITION

The following marks are published in compliance with section 12(a) of the Trademark Act of 1946. Applications for the registration of marks in more than one class have been filed as provided in section 30 of said act as amended by Public Law 772, 87th Congress, approved Oct. 9, 1962, 76 Stat. 769. Opposition under section 13 may be filed within thirty days of the date of this publication. See rules 2.101 to 2.105.

A separate fee of two hundred dollars for opposing each mark in each class must accompany the opposition.

SECTION 1.—INTERNATIONAL CLASSIFICATION

The short titles associated below with the international class numbers are terms designed merely for quick identification and are not an official part of the international classification. The full names of international classes are given in section 6.1 of the trademark rules of practice.

The designation "U.S. Cl." appearing in this section refers to the U.S. class in effect prior to Sep. 1, 1973 rather than the international class which applies to applications filed on or after that date. For adoption of international classification see notice in the OFFICIAL GAZETTE of Jun. 26, 1973 (911 O.G. TM 210).

SECTION 2.—INTERNATIONAL CLASSIFICATION

The short titles associated below with the international class numbers are terms designed merely for quick identification and are not an official part of the international classification. The full names of international classes are given in section 6.1 of the trademark rules of practice.

The designation "U.S. Cl." appearing in this section refers to the U.S. class in effect prior to Sep. 1, 1973 rather than the international class which applies to applications filed on or after that date. For adoption of international classification see notice in the OFFICIAL GAZETTE of Jun. 26, 1973 (911 O.G. TM 210).

SECTION 1.—INTERNATIONAL CLASSIFICATION

The short titles associated below with the international class numbers are terms designed merely for quick identification and are not an official part of the international classification. The full names of international classes are given in section 6.1 of the trademark rules of practice.

The designation "U.S. Cl." appearing in this section refers to the U.S. class in effect prior to Sep. 1, 1973 rather than the international class which applies to applications filed on or after that date. For adoption of international classification see notice in the OFFICIAL GAZETTE of Jun. 26, 1973 (911 O.G. TM 210).

TRADEMARK REGISTRATIONS AMENDED, CORRECTED, ETC.

The designation "U.S. Cl." appearing in this section refers to the U.S. class in effect prior to Sep. 1, 1973 rather than the international class which applies to applications filed on or after that date. For adoption of international classification see notice in the OFFICIAL GAZETTE of Jun. 26, 1973 (911 O.G. TM 210).

Any change to the registration will be indicated at the bottom of each entry under ELEMENTS AMENDED, CORRECTED OR RESTRICTED. With the exception of changes to the goods and services, additions to the registration will appear in asterisks and deletions of the registration will appear in brackets. Elements which are only changed will be listed with no punctuation. As to the goods/services statement, amendments to the goods/services will appear in asterisks and deletions will appear in brackets. In addition if any change to the goods/services occurs, the element "Goods/Services" will be listed under ELEMENTS AMENDED, CORRECTED OR RESTRICTED.
